(An Autonomous Institute Affiliated to RTM Nagpur University, Nagpur)

**Third Year (Semester-VI) B. Tech. Mechanical Engineering**

**BME33601: Internal Combustion Engine**

Teaching Scheme		Examination Scheme	
Lectures	3Hr/Week	CT	30 Marks
Tutorials	-	CA	10 Marks
Total Credits	3	ESE	60 Marks
		Total	100 Marks
		Duration of ESE: 03Hrs	

**Course Objectives:**

1	To learn the concept of IC Engine
2	To understand the concept of fuel supply and engine lubrication
3	To apply the basic knowledge of ignition in IC engine
4	To analyze the testing and performance of IC engine
5	To understand recent advances in IC engine

Course Contents		Hours
<b>Unit I</b>	<b>Introduction:</b> Introduction, Engine Classification, components of I. C. Engines, Two stroke SI and CI engines, Four stroke SI and CI engines, Comparison of SI and CI Engines, valve and port timing diagram. Advantages and disadvantages, applications.	(9)
<b>Unit II</b>	<b>Fuels and its supply system for IC Engines:</b> Important qualities of IC engine fuels, rating of fuels, Carburetion, mixture requirement for different loads and speeds, simple carburetor and its working, types of carburetors, MPFI, types of injection systems in CI engine, fuel pumps and injectors, types of nozzles, spray formation. <b>Engine cooling and lubrication:</b> Necessity of engine cooling, disadvantages of overcooling, Cooling systems and their comparison, Air cooling, Liquid cooling, types of lubricants and their properties, SAE rating of lubricants, Types of lubrication systems, Supercharging/Turbo-charging: Objectives, Limitations, Methods and Types, Different arrangements of turbochargers and superchargers	(9)
<b>Unit III</b>	<b>Ignition and Combustion in IC Engines:</b> Function of Ignition system, Battery and Magneto Ignition system, Electronic Ignition system, Spark plug and its types, Firing order, Types of combustion chambers in SI and CI engines, Stages of combustion in SI engines, abnormal combustion and knocking in SI engines, factors affecting knocking, effects of knocking, control of knocking, combustion chambers for SI engines, Stages of combustion in CI engines, detonation in C.I. engines, factors affecting detonation, controlling detonation, engine emission	(9)
<b>Unit IV</b>	<b>Testing and Performance of IC Engine:</b> Measurement of Indicated power, brake power, Friction Power, Willan's Line Method, Morse Test, Motoring Test, Dynamometers, indicated thermal efficiency, brake thermal efficiency and volumetric efficiencies, performance maps, Engine testing standards, heat	(9)

	balance sheet.	
UnitV	<b>Recent Trends in IC Engines:</b> LHR engines, lean burn engines, stratified charge spark ignition engine, homogeneous charge compression ignition, reactivity-controlled compression ignition, six stroke engine concept, Electric Vehicle, hybrid engine vehicle, Hydrogen Internal Combustion Engine.	(9)
<b>Text Books</b>		
T.1	Internal Combustion Engine by V Ganeshan, McGraw Hill Education Pvt. Ltd.	
T.2	Internal Combustion Engine by R. K. Rajput, Laxmi Publication	
<b>Reference Books</b>		
R.1	Internal Combustion Engines, E. Obert, Intex educational publication.	
R.2	Internal Combustion Engine fundamental by John Heywood, Tata MCGraw Hill Publication	

<b>Useful Links</b>

2	<a href="https://nptel.ac.in/courses/112103262">https://nptel.ac.in/courses/112103262</a>

	<b>Course Outcomes</b>	<b>CL</b>
<b>BME33601.1</b>	Interpret the principles of IC engines, including valve and port timing diagrams, to know advantages, disadvantages, and applications.	3
<b>BME33601.2</b>	Apply the concepts of engine cooling and lubrication systems to enhance the performance and reliability of internal combustion engines.	3
<b>BME33601.3</b>	Explain the function of ignition systems in SI and CI engines, including factors that influence knocking and abnormal combustion.	4
<b>BME33601.4</b>	Calculate SI and CI engine performance, including emission factors affecting knocking and detonation.	3
<b>BME33601.5</b>	Illustrate recent trends in IC engines to gain advantages, disadvantages, and challenges.	3

**BME33602: Mechatronics & Robotics**

Teaching Scheme		Examination Scheme	
Lectures	3Hr/Week	CT	30
Tutorials	-	CA	10
Total Credits	3	ESE	60
		Total	100 Marks
		Duration of ESE: 03 Hrs	

**Course Objectives:**

1	To introduce students to the fundamental concepts of Mechatronics systems and its interdisciplinary nature
2	To develop programming skills for automation using PLCs and design ladder logic diagrams for real-time systems.
3	To familiarize students with Supervisory controlled Data acquisition system along with virtual instrumentation as a tool for real-time monitoring and control in modern industries.
4	To develop foundational knowledge for robot hardware, design and integration
5	To Understand different methods used for programming robots.

Course Contents		Hours
<b>Unit I</b>	Introduction to Mechatronics Systems, Scope and Elements of Mechatronics, Mechatronics Design Process, Sensors, Integrated Circuits and Actuators, Control Systems, Close loop and open loop control system,  Case Studies on Mechatronics Systems such as Temperature Controller, High-Speed Tilting Trains, Antilock Braking System (ABS), Engine Management System, Smart Irrigation System for Drought-Prone Regions, Smart HVAC (Heating, Ventilation, and Air Conditioning) System.	(9)
<b>Unit II</b>	<b>Programmable Logic Controller (PLCs)</b> , Basic structure of PLC, Principle of operation of PLC, PLC programming languages, ladder diagram, latching, timer, counters, Selection criteria of PLC.  <b>Application of PLC:</b> Extending and retracting a pneumatic piston using latches, control of two pneumatic pistons, Smart Elevator Control, Conveyor Belt with Object Sorting, Automatic Water Tank Level Controller.	(9)
<b>Unit III</b>	<b>Data Acquisition Systems (DAQ)</b> , Components of DAQ, Role of DAQ in real-time control and monitoring.  <b>Virtual Instrumentation (VI):</b> Its need, Tools use for Virtual Instrumentation, Software use for Virtual Displays (e.g. LabView, MATLAB etc), Real-Time Monitoring and Control, Traditional methods of monitoring and control, Cloud-based Monitoring Systems, Edge-based Real-Time Systems.  <b>Supervisory Control and Data Acquisition (SCADA):</b> As an Extension of DAQ, SCADA functions (Data visualization, alarm management, logging, and supervisory control), Stand alone DAQ vs SCADA, Communication Protocol of SCADA (e.g. MODBUS, OPC, Ethernet/IP)	(9)

<b>Unit IV</b>	<b>Introduction to Robotics and Robotic Components:</b> <b>Types of Robots:</b> Cartesian, Cylindrical, Articulated, SCARA, Delta, Mobile Robots. <b>Basic Components of a Robot:</b> Manipulator/Arm, End-effector (grippers, tools), Actuators (Electric, Pneumatic, Hydraulic), Sensors (Proximity, Vision, Force, IR, Ultrasonic), Controller (Microcontroller/PLC-based). <b>Robot Drive Systems:</b> Servo, Stepper, DC drives	<b>(9)</b>
<b>Unit V</b>	<b>Robot Programming and Applications:</b> <b>Robot Programming Methods:</b> Manual Teach, Lead-through, Offline programming, PLC programming (intro to simulation tools like RoboDK or MATLAB Robotics Toolbox). <b>Safety in Robotics:</b> Safety sensors, emergency stops, safety standards (ISO 10218). <b>Robotics Applications: Industrial:</b> Welding, Painting, Pick and Place, Assembly, Inspection. <b>Emerging:</b> Agriculture, Medical Surgery, Defense, Warehouse Automation	<b>(9)</b>
<b>Text Books</b>		
T.1	Mechatronics Borole, Rajesh P; Angal, Yogesh S; Patil, Varsha K., Nirali Prakashan, 4th Edition, 2005	
T.2	Mechatronics Integrated Mechanical Ramachandran K.P., Willey.	
T.3	Boltan W, Mechatronics : Pearson Education, 11th Edition, 2005	
<b>Reference Books</b>		
R.1	Introduction to Mechatronics and Measurement Systems , David Alciators & Michael B. Histan, Tata McGraw Hills, India	
R.2	Mechatronics : HMT LTD, McGraw-Hill

	<b>Course Outcomes</b>	<b>CL</b>
<b>BME33602.1</b>	<b>Explain</b> feedback control in Mechatronics systems to determine real-time case studies.	4
<b>BME33602.2</b>	<b>Summarize</b> ladder logic programs using timers for recent applications in Programmable Logic Controllers.	5
<b>BME33602.3</b>	<b>Interpret</b> data acquisition and SCADA systems for real-time industrial monitoring.	3
<b>BME33602.4</b>	<b>Classify</b> robots based on configuration to find requirements in specific applications.	4
<b>BME33602.5</b>	<b>Differentiate</b> robot programming methods to know safety protocols, design, and robot programming techniques.	4

Teaching Scheme		Examination Scheme	
Lectures	2 Hr/Week	CT	15 Marks
Tutorials	-	CA	5 Marks
Total Credits	2	ESE	30 Marks
		Total	50 Marks
		Duration of ESE: 02Hrs	

**Course Objectives:**

1	To understand the significance of various management skills in different organizational contexts.
2	To understand the different types of plant layouts.
3	To understand comprehension of material requirement planning (MRP) and storekeeping procedures by explaining their underlying principles, processes, and objectives

Course Contents		Hours
<b>Unit I</b>	<b>Basics of industrial Management</b> Management - Definition-Administration-Definition-Henry-Fayol's principles of management- Business Organisation- Types- Proprietorship- Partnership- Joint stock- Cooperative Society-Advantages and disadvantages -Functions of Management - Planning Definition-Functions- Organisation- Definition- types of organisation -Line-Functional-Line & staff-advantages and disadvantages- Leadership -Types -Quality of good leader Motivation - Maslow's Theory of Motivation -Hierarchy of needs- Communication - Process of Communication - Barriers for effective communication.	(9)
<b>Unit II</b>	<b>Production management</b> Concept of project work - Project planning -Market survey- Project capacity- selection of site for project- Plant layout-Types of Plant layout- Product design- Stages in product design drawing-Specifications-Material requirement-operation- Planning-Production-definition-Job, Batch & Mass production with their advantages and disadvantages- Productivity-definition factors to improve productivity- Production planning and Control (PPC)-definition-Functions of PPC- planning, routing, scheduling, dispatching and Inspection-Introduction to CPM and PERT -Comparison.	(9)
<b>Unit III</b>	<b>Materials management</b> Material management - definition, functions- Purchase - Objectives, different methods of purchasing -Purchase procedure-Comparative statement-purchase order-Tender-Types of tender- Store keeping- classification of stores - Functions of store keeper. Store management Bin Card - Material Issue Requisition-Material Returned Note- Store ledgers -Codification of stores-Inventory Management- Definition - functions of Inventory Control- Advantages of Inventory Control Enterprise resource planning - concept, features and applications.- Material Requirement Planning (MRP)-concept, applications -Justin Time (JIT)-concept and benefits-Supply chain management-concept and benefits -FIFO(first in first out) concept-definition.	(9)

Teaching Scheme		Examination Scheme	
Lectures	4 Hr/Week	CT	-
Tutorials	-	CA	25 Marks
Total Credits	2	ESE	25 Marks
		Total	50 Marks
		Duration of ESE : 02 Hrs	

**Course Objectives:**

- 1 Understand the fundamentals of 3D modeling and simulation software (CREO and ANSYS).
- 2 Apply design tools in CREO to create detailed part and assembly models.
- 3 Simulate and analyze real-world mechanical problems using ANSYS.
- 4 Integrate CAD and FEA tools for product development and testing.
- 5 Develop skills for industry-based design validation and optimization.

Sr. No.	List of Experiment	CO
1	Introduction to CREO: Sketching and Part Modeling of a Mechanical Component	CO1
2	Advanced 3D Modeling in CREO: Gear, Coupling, or Crankshaft	CO1
3	CREO Assembly Modeling: Assemble a Shaft-Bearing-Housing System	CO2
4	Drafting and Detailing in CREO: 2D Drawing Extraction from 3D Model	CO2
5	Introduction to ANSYS: Geometry Import and Meshing Techniques	CO3
6	Static Structural Analysis in ANSYS: Cantilever Beam under Load	CO3
7	Thermal Analysis in ANSYS: Heat Transfer through Fin	CO3
8	Modal Analysis in ANSYS: Natural Frequency of a Bracket	CO4
9	Stress Analysis of Assembly Model: Imported from CREO to ANSYS	CO4
10	Mini-Project: Design and Analysis of a Mechanical Part/Assembly (e.g., Chassis Frame or Connecting Rod)	CO5

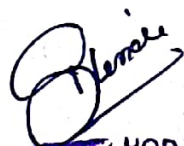

**Text Books**

T.1	"Creo Parametric 10.0 for Engineers and Designers" – Sham Tickoo
T.2	"PTC Creo Parametric 10.0 Tutorial" – Kristin Eckstein, Roger Toogood
T.3	"Learning Creo Parametric 10.0" – Randy Shih

T.4	"Introduction to Finite Element Analysis Using ANSYS" – Saeed Moaveni
<b>Reference Books</b>	
R.1	Practical Finite Element Analysis Author: Nitin S. Gokhale et al. Publisher: Finite to Infinite
R.2	ANSYS Workbench 2023 R1: A Tutorial Approach Author: Prof. Sham Tickoo Publisher: CADCIM Technologies

	Course Outcomes	CL
<b>BME33604.1</b>	<b>Demonstrate</b> the ability to model complex mechanical components using CREO, to enhance knowledge of advanced features.	3
<b>BME33604.2</b>	<b>Analyze</b> the assembly modeling and drafting capabilities of CREO by creating complex assemblies for learning practical skills.	3
<b>BME33604.3</b>	<b>Construct</b> 3D models and assemblies using CREO to perform static analysis using ANSYS.	3
<b>BME33604.4</b>	<b>Differentiate</b> material behavior under various load conditions to find simulation results.	4
<b>BME33604.5</b>	<b>Summarize</b> engineering components through integrated use of CAD and FEA tools to determine optimization of Assembly model.	5

Tutorials	-	CA	10 Marks
Total Credits	4	ESE	60 Marks
		Total	100 Marks
		Duration of ESE: 03Hrs	

**Course Objectives:**

- 1 Students will understand the Fundamentals of fluid power
- 2 Students will analyze and design Systems of hydraulic system
- 3 Students will apply Practical Skills Pneumatic system

Course Contents		Hours
<b>Unit I</b>	<b>Fluid Power Principles And Hydraulic Pumps</b> Introduction to Fluid power – Advantages and Applications – Fluid power systems – Types of fluids – Properties of fluids and selection – Basics of Hydraulics – Pascal's Law – Principles of flow – Friction loss – Work, Power and Torque Problems, Sources of Hydraulic power : Pumping Theory – Pump Classification – Construction, Working, Design, Advantages, Disadvantages, Performance, Selection criteria of Linear and Rotary – Fixed and Variable displacement pumps – Problems.	(9)
<b>Unit II</b>	<b>Hydraulic Actuators And Control Components</b> Hydraulic Actuators: Cylinders – Types and construction, Application, Hydraulic cushioning – Hydraulic motors – Control Components: Direction Control, Flow control and pressure control valves – Types, Construction and Operation – Servo and Proportional valves – Applications – Accessories: Reservoirs, Pressure Switches – Applications – Fluid Power ANSI Symbols – Problems.	(9)
<b>Unit III</b>	<b>Hydraulic Circuits And Systems</b> Accumulators, Intensifiers, Industrial hydraulic circuits – Regenerative, Pump Unloading, Double-Pump, Pressure Intensifier, Air-over oil, Sequence, Reciprocation, Synchronization, Fail-Safe, Speed Control, Hydrostatic transmission, Electro hydraulic circuits, Mechanical hydraulic servo systems.	(9)
<b>Unit IV</b>	<b>Pneumatic And Electro Pneumatic Systems</b> Properties of air – Perfect Gas Laws – Compressor – Filters, Regulator, Lubricator, Muffler, Air control Valves, Quick Exhaust Valves, Pneumatic actuators, Design of Pneumatic circuit – Cascade method – Electro Pneumatic System – Elements – Ladder diagram – Problems, Introduction to fluidics and pneumatic logic circuits.	(9)
<b>Unit V</b>	<b>Trouble Shooting And Applications</b> Installation, Selection, Maintenance, Trouble Shooting and Remedies in Hydraulic and Pneumatic systems, Design of hydraulic circuits for Drilling, Planning, Shaping, Surface grinding, Press and Forklift applications. Design of Pneumatic circuits for Pick and Place applications and tool handling	(9)

	in CNC Machine tools – Low cost Automation – Hydraulic and Pneumatic power packs.

		Total	100 Marks
		Duration of ESE: 03Hrs	

**Course Objectives:**

1	Understand the basic structure and principles of measuring system
2	Explore various sensing and signal conditioning elements used in measurement systems
3	Familiarize students with the instruments used for measuring pressure, displacement, force, torque and power
4	To understand standards of measurement, linear and angular measurement methods, and precision tools.
5	Provide knowledge on limits and fits, gauges and advanced inspection tools for precision engineering

Course Contents		Hours
<b>Unit I</b>	Purpose, structure and elements of measuring system. Static characteristics of measurement system, elements including systematic, statistical characteristics, generalized model of system elements and calibration. Error measurement, error probability density function, error reduction. Introduction to dynamic characteristics of measurement system. Introduction to noise in measurement system.	(9)
<b>Unit II</b>	Classification, Principle, Sensing elements, Signal conditioning elements, Construction, Range and working of instruments for measurement of Linear and Angular Displacement, Speed, Load, Strain, Force, Torque and Power. (Analytical treatment not included)	(9)
<b>Unit III</b>	Classification, Principle, Sensing elements, Signal conditioning elements, Construction, Range and working of instruments for measurement of Pressure, Vacuum, Sound, Light and Temperature. (Analytical treatment not included)	(9)
<b>Unit IV</b>	Standards of Measurement, Line, End and Wavelength standard, Working standards, Requirement of interchangeability, Allowance and Tolerance, Selective assembly, Measurement of Straightness and Flatness. Instruments for Linear and Angular Measurement. (Vernier, Angle gauge, Sine bar, Level indicator, Clinometers and Taper gauge)	(9)
<b>Unit V</b>	Limits and Fits, Tolerance analysis of Limits and Fits, Types of limit gauges, Types of fit, Shaft and Hole basis system, Design of Limit gauge and Process planning sheet (Numerical treatment is expected).  Comparators: Mechanical, Optical, Electrical, Electronic, Pneumatic. Study and use of Optical profile projectors, Tool maker's microscope and Autocollimator. Measurement of	(9)

	Screw thread and Gear tooth.

Tulsiramji Gaikwad Patil College of  
Engineering, Nagpur

Dean Academics  
Tulsiramji Gaikwad-Patil  
College Of Engineering  
and Technology, Nagpur

**Tulsiramji Gaikwad-Patil College of Engineering and Technology**  
Wardha Road, Nagpur-441108  
**NAAC Accredited with A+ Grade**  
(An Autonomous Institute Affiliated to RTM Nagpur University, Nagpur)

**Third Year (Semester-VI) B. Tech. Mechanical Engineering**

**BME33607: (PE-II) Automotive Maintenance and Industrial Safety**

Teaching Scheme		Examination Scheme	
Lectures	4 Hr/Week	CT	30 Marks
Tutorials	-	CA	10 Marks
Total Credits	4	ESE	60 Marks
		Total	100 Marks
		Duration of ESE:03Hrs	

**Course Objectives:**

1	Equip students with knowledge on accident causes, prevention methods, industrial hazards, and safety requirements.
2	Provide a comprehensive understanding of maintenance engineering principles, types, and equipment life-cycle management.
3	Study wear and corrosion prevention, and lubrication methods for enhancing system reliability.
4	Develop skills to systematically trace, analyze, and diagnose faults in various equipment using structured techniques.
5	Equip students with skills for periodic and preventive maintenance of mechanical and electrical equipment.

**Course Contents**

		Hours
<b>Unit I</b>	<b>Industrial Safety</b> Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/ procedure, describe salient points of factories act 1948 for health and safety, washrooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc., Safety color codes. Fire prevention and firefighting, equipment and methods.	(9)
<b>Unit II</b>	<b>Maintenance Engineering</b> Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.	(9)
<b>Unit III</b>	<b>Wear and corrosion and their prevention</b> Wear-types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.	(9)
<b>Unit IV</b>	<b>Fault Tracing</b> Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like ,i. Anyone machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi.	(9)

	Electrical motors,       Types of faults in machine tools and their general causes.	
UnitV	<b>Periodic and preventive maintenance</b>  Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: i. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, Advantages of preventive maintenance. Repair cycle concept and importance.	(9)

Teaching Scheme		Examination Scheme	
Lectures	4Hr/Week	CT	30 Marks
Tutorials	-	CA	10 Marks
Total Credits	4	ESE	60 Marks
		Total	100 Marks

Duration of ESE: 03Hrs

**Course Objectives:**

1	To study modeling and transfer function of linear time-invariant system
2	To understand the stability, time domain specifications and tools
3	To understand classical controller/compensator design for linear system
4	To study frequency domain analysis of linear system
5	An introduction to state space approach and to understand the theory state transition matrix

**Course Contents**

		Hours
Unit I	<b>Introduction to Control System:</b> Need of control system, Open loop control and closed loop control, Significance of actuators and sensors, Control system Components (DC/AC servomotors, potentiometer, synchro), Mathematical representation of simple mechanical, electrical and electromechanical systems, Transfer function, Block diagram representation and reduction. Signal flow graph.	(9)
Unit II	<b>Time Response Analysis:</b> - Concept of transient response, steady state response and time response, standard test signals-type and order of system, steady state error analysis, static error constants, Time response of first and second order system, dominant poles, Time response specifications of second order system, Different types of Controllers (PD, PI, PID) Introduction of LAG, LEAD compensation.	(9)
Unit III	<b>Stability analysis &amp; Root locus:</b> Stability of control systems, condition of stability, characteristics equation, Routh Hurwitz criterion, special cases for determining relative stability. Root location and its effect on time response, elementary idea of root locus, effect of addition of pole and zero on proximity of imaginary axis.	(9)
Unit IV	<b>Frequency Domain Analysis:</b> - Concept of frequency response of a dynamical system. Construction of Bode plot, the stability margin on Bode plot and assessing close-loop stability. Construction of polar plot for a system. Nyquist stability criterion and stability margin. Effect of gain variation and addition of poles and zeroes on the frequency response plots.	(9)
Unit V	<b>State Variable Analysis:</b> - Concept of state, state variable and state model, Systems state model with physical variable, phase variable and canonical variables with state diagram, Transfer function from state model, Stability of state space model.	(9)

		Total	100 Marks
		Duration of ESE: 03 Hrs	

**Course Objectives:**

- 1 Understand the Fundamental Principles
- 2 Apply FEM to Solve Engineering Problems
- 3 Develop Computational Skills
- 4 Analyze and Interpret FEM Results
- 5 Enhance Problem-Solving and Research Skills

**Course Contents**

**Hours**

<b>Unit I</b>	Introduction to Engineering Analysis tool FEA and its application in Linear static Analysis and 2D problems, Study of Finite Element modeling and simulation Techniques, Use of FEA in structural vibration and thermal Analysis.	(9)
<b>Unit II</b>	Basics of FEM – Review of finite difference method, Initial value and boundary value problems Solution of Boundary Value problems: - weighted residual, Galerkin and Raleigh Ritz methods, Variational Method, Least square Methods. Introduction to meshless FEM, FEA and Linking mechanical design with FEA	(9)
<b>Unit III</b>	Two Dimensional Elements: Linear Triangular Elements, Rectangular Elements, Two Dimensional Field equations: Coordinate Systems, Isoparametric elements and numerical integration, Integral equations for the element Matrices, Heat transfer by conduction: One dimensional fins, two dimensional fins, and Long and convection Two Dimensional bodies.	(9)
<b>Unit IV</b>	FEA applications in Solid Mechanics: The axial force members, potential energy formulations. The Truss Element, Beam element, plane frame element, modeling of bolts for assembly, 3D problems.	(9)
<b>Unit V</b>	Two dimensional Elasticity: The displacement functions, Element matrices, Element Shape Functions: Evaluating shape functions FEM Computations Solution Methods, FEM Modeling and Preprocessing FEM Hardware and Postprocessing Survey of some FE Software Systems.	(9)

		Total	100 Marks
		Duration of ESE:03Hrs	

**Course Objectives:**

1	To understand the evolution and trends of advanced manufacturing and its comparison to traditional methods.
2	To explore additive manufacturing processes, their benefits, and limitations.
3	To learn about subtractive and hybrid manufacturing techniques.
4	To study advanced materials and processing techniques.
5	To explore the applications, quality control, and future trends in manufacturing.

**Course Contents**

**Hours**

<b>Unit I</b>	<b>Introduction to Advanced Manufacturing;</b> Overview of Manufacturing Evolution; Need for Advanced Manufacturing Techniques; Comparison with Traditional Manufacturing Processes; Technological Advancements Driving Manufacturing Innovation; Emerging Trends in Advanced Manufacturing; Advantages of Advanced Manufacturing Techniques; Future Scope and Challenges	<b>(9)</b>
<b>Unit II</b>	<b>Additive Manufacturing and 3D Printing: Introduction to Additive Manufacturing (AM);</b> Evolution and Technological Improvements; AM Process and Classification; Materials Used in Additive Manufacturing; Advantages of Additive Manufacturing; Limitations of Additive Manufacturing; Additive vs. Conventional Manufacturing Processes	<b>(9)</b>
<b>Unit III</b>	<b>Subtractive and Hybrid Manufacturing;</b> Introduction to Subtractive Manufacturing; CNC Machining and Automation; Electric Discharge Machining (EDM); Electrochemical Machining (ECM); Laser Beam Machining; Water Jet Cutting; Hybrid Manufacturing Systems; Applications and Advantages of Subtractive and Hybrid Processes	<b>(9)</b>
<b>Unit IV</b>	<b>Advanced Processing and Materials;</b> Introduction to Advanced Material Processing, Advanced Material Forming Techniques, Powder Metallurgy and Sintering, Additive Manufacturing Materials, High-Performance Materials in Manufacturing, Ceramic and Composite Materials, Non-Traditional Welding and Joining Methods, Future Trends in Materials Processing	<b>(9)</b>
<b>Unit V</b>	<b>Applications, Quality, and Future Trends;</b> Applications in Aerospace, Automotive, Biomedical, and Electronics, Digital Manufacturing and Industry 4.0, Smart Factories and the Role of IoT, Cyber-Physical Systems and Automation, Quality Control and Inspection Techniques, Process Control and Optimization, Sustainability and Green Manufacturing, Future Trends in Manufacturing Technologies	<b>(9)</b>

**Course Objectives:**

- 1 To study the various OR tools,
- 2 To apply appropriate model to the given situation.
- 3 To Formulate the problem.
- 4 To Solve and analyze the problem
- 5 To mathematical models and solve management problems.

Course Contents		Hours
<b>Unit I</b>	Introduction to O.R. & basic O.R. Models, Characteristics, phases & Methodology of O.R., Limitations & Applications. Linear Programming:- Introduction, Linear programming problem formulation, LPP Solution by Graphical Method, Simplex Method, Principle of Duality & Formulation of Model only, Sensitivity Analysis Concept Only.	(9)
<b>Unit II</b>	Formulation of transportation model, Basic feasible solution using different methods (North- West corner, Least Cost, Vogel's Approximation Method) Optimality Methods, Unbalanced transportation problem, Variants in Transportation Problems. Formulation of the Assignment problem, unbalanced assignment problem, typical assignment & travelling salesman problem	(9)
<b>Unit III</b>	Replacement Models-Concept of equivalence, Interest Rate, Present worth, economic evaluations of Alternatives, Group replacement models. Inventory Control Models- Introduction and inventory management concepts, Economic Order Quantity model (EOQ), Economic Production Quantity model (EPQ), model for purchase allowing for shortages, ABC analysis.	(9)
<b>Unit IV</b>	Drawing of Network, CPM & PERT, probability of completion of project, Cost Analysis of Project, and Concept of Crashing. Allocation & updating of Network.	(9)
<b>Unit V</b>	Sequencing Model- Introduction, Sequencing Model n job two machines problem, n job 3 machines problem, 2 jobs m machine problem. Simulations -Concept, applications in waiting line situations, inventory and network. Queuing models- Poisson arrivals and Exponential service times -Single channel models (MM1) and Multi channel models. (No derivation expected)	(9)

### Third Year (Semester-VI) B. Tech. Mechanical Engineering

#### BME33612: (PE-III) Industrial Robotics

##### Teaching Scheme

Lectures	4 Hr/Week
Tutorials	-
Total Credits	4

##### Examination Scheme

CT	30 Marks
CA	10 Marks
ESE	60 Marks
Total	100 Marks

Duration of ESE: 03Hrs

##### Course Objectives:

- 1 To introduce the functional elements of robotics.
- 2 To impart knowledge on robot end effector and grippers.
- 3 To introduce the dynamics and control of manipulators in robotics.
- 4 To understand the basic concepts of robotic sensors used in industries.
- 5 To understand the cell layouts of robots and their interfaces.

##### Course

##### Hours

##### Contents

<b>Unit I</b>	Basic concepts :-Brief history-Types of Robot-Technology-Robot classifications and specifications- Design and control issues-Various manipulators-Sensors- workcell-Programming languages.	(9)
<b>Unit II</b>	Robot end- effectors- classification of end- effectors, mechanical grippers, hooking or lifting grippers, grippers for molten metal's, plastics, vacuum cups ,magnetic grippers, electrostatic grippers, multiple grippers, internal & external grippers, drive systems for grippers, active & Passive grippers.	(9)
<b>Unit III</b>	Direct and inverse kinematics:-Mathematical representation of Robots-Position and orientation -Homogeneous transformation Various joints-Representation using the Denavit Hattenberg parameters- Degrees of freedom- Direct kinematics-Inverse kinematics- SCARA robots- Solvability – Solution methods-Closed form solution.	(9)
<b>Unit IV</b>	Robot Sensors: Scheme of robotic sensors, contact type sensors, force, torque, touch, position, velocity sensors, non-contact type sensors, electro-optical imaging sensors, proximity sensors, range imaging sensors, robot environment and robot input/ output interfaces, machine intelligence, Safety measures in robots.	(9)
<b>Unit V</b>	Robot cell layouts, multiple robots and machine interface, other considerations in work cell design, work cell control, interlocks, error detection and recovery, Quantitative Techniques for economic performance of robots: Robot investment costs, robot operating expenses. General considerations in robot material handling, material transfer applications, pick and place operations, machine loading and unloading, die casting, plastic molding, forging, machining operations, stamping press operations using robots.	(9)

Lectures	2 Hr/Week	CT	15 Marks
Tutorials	-	CA	05 Marks
Total Credits	2	ESE	30 Marks
		Total	50 Marks
		Duration of ESE: 02Hrs	

**Course Objectives:**

1	Understand the fundamental concepts and terminologies of AI and Machine Learning.
2	Develop skills to choose, plan, and execute AI projects collaboratively within a team.
3	Recognize the roles and responsibilities of AI team members within organizations.

Course Contents		Hours
<b>Unit I</b>	Introduction: Machine Learning, What is data, The terminology of AI, What makes an AI company, What machine learning can and cannot do. Non-technical explanation of deep learning, basics of neural networks. Examples of AI. Application domains of AI	(9)
<b>Unit II</b>	Building AI projects Workflow of a machine learning project, Workflow of a data science project, How to use data, How to choose an AI project, Working with an AI team, How to process and visualize data. Technical tasks for AI teams, use of python in AI related projects	(9)
<b>Unit III</b>	Building AI in Your Company: Smart speaker, Case study: Self-driving car. Example roles of an AI team, AI protocols to avoid, Survey of major AI application areas AI and Society A realistic view of AI, Discrimination/Bias, Adversarial attacks on AI, Adverse uses of AI, AI and developing economies, AI and jobs	(9)

	Course Outcomes	CL
<b>BCS33601.1</b>	<b>Explain</b> the fundamentals of machine learning, including data, AI terminology, and the capabilities to enhance knowledge of machine learning.	4
<b>BCS33601.2</b>	<b>Interpret</b> the technical tools and methodologies used in AI projects, to determine their effectiveness in project development.	2
<b>BCS33601.3</b>	<b>Evaluate</b> the applications and implications of AI in industries, to find potential risks and benefits.	5

HOD

Mechanical Engineering (NBA Accredited)  
Tulsiramji Gaikwad Patil College of  
Engineering, Nagpur

Dean Academics  
Tulsiramji Gaikwad-Patil  
College Of Engineering  
and Technology, Nagpur

**Tulsiramji Gaikwad-Patil College of Engineering and Technology**  
Wardha Road, Nagpur-441108  
**NAAC Accredited with A<sup>+</sup> Grade**  
(An Autonomous Institute Affiliated to RTM Nagpur University, Nagpur)

**Third Year (Semester-VI) B. Tech. Mechanical Engineering**

**BME33613: Internal Combustion Engine Lab**

Teaching Scheme		Examination Scheme	
Lectures	2Hr/Week	CT	-
Tutorials	-	CA	25 Marks
Total Credits	1	ESE	25 Marks
		Total	50 Marks
		Duration of ESE : 02 Hrs	

**Course Objectives:**

- 1 To learn the basic concept of I C Engine
- 2 To enhance the knowledge of IC engine
- 3 To share complete knowledge of type of fuels used in IC engines and the fuel supply systems
- 4 To describe combustion phenomena in IC engines
- 5 To explain the different performance analysis of IC engines

Sr. No.	List of Experiment	CO
1	Assemble/Dismantle Multi cylinder Petrol Engine.	CO1
2	Assemble/Dismantle Multi cylinder Diesel Engine.	CO1
3	Demonstrate The Significance Of Fuel Injection And Ignition Systems Of IC Engine	CO2
4	Demonstrate The Importance of Different types of Carburetor used in Petrol Engine	CO2
5	Demonstrate The Importance Of Engine Cooling And Lubrication System Of IC Engine	CO3
6	To study the Actual valve timing diagram of 4 stroke petrol engine.	CO4
7	Perform Load Test On Petrol Engine Test Rig To Prepare The Heat Balance Sheet And Plot Performance Curve	CO4
8	Perform Morse Test on the Petrol Engine Test Rig	CO4
9	To study the Actual valve timing diagram of 4 stroke diesel engine.	CO5
10	Perform Load Test On Diesel Engine Test Rig To Prepare The Heat Balance Sheet And Plot Performance Curve	CO5

**Text Books**

T.1	Internal Combustion Engine by V Ganeshan, McGraw Hill Education Pvt. Ltd.
T.2	Internal Combustion Engine by R. K. Rajput, Laxmi Publication
T.3	Internal Combustion Engines by V. M. Domkundwar, Dhanpat Rai Publications (P) Ltd.
T.4	Internal Combustion Engine by M. L. Mathur and R. P. Sharma, Dhanpat Rai Publications (P) Ltd

**Reference Books**

R.1	Internal Combustion Engines, E. Obert, Intex educational publication.
R.2	Internal Combustion Engine fundamental by John Heywood, Tata MCGraw Hill Publication

2	<a href="https://nptel.ac.in/courses/112103262">https://nptel.ac.in/courses/112103262</a>

	Course Outcomes	CL
<b>BME33613.1</b>	<b>Demonstrate</b> the ability to safely assemble and dismantle a multi-cylinder petrol engine,	3
<b>BME33613.2</b>	<b>Demonstrate</b> knowledge of carburetors used in petrol engines, to aware importance in air-fuel mixture preparation.	3
<b>BME33613.3</b>	<b>Analyze</b> the engine cooling and lubrication systems of IC engines, to know their key components, functions,	3
<b>BME33613.4</b>	<b>Evaluate</b> the performance of a multi-cylinder petrol engine using the Morse test	3
<b>BME33613.5</b>	<b>Summarize</b> the performance characteristics of a diesel engine under varying load conditions, to find heat balance sheet and performance curves	5

**Third Year (Semester-VI) B. Tech. Mechanical Engineering**

**BME33614: Mechatronics & Robotics Lab**

Teaching Scheme		Examination Scheme	
Practical	2Hr/Week	-	-
	-	CA	25
Total Credits	1	ESE	25
		Total	50 Marks
		Duration of ESE: 02 Hrs	

**Course Objectives:**

1	To familiarize students with the identification and application of electronic components, sensors, and actuators used in Mechatronics systems
2	To enhance the understanding of industrial automation by analyzing and executing automation task using standard model
3	To apply PLC programming concepts for automation tasks including bottle filling, lift control, and water level management.
4	To demonstrate the use of electro-pneumatic and hydraulic systems for motion control in industrial automation
5	To develop the ability to compare various industrial robots based on their configuration and degrees of freedom.

Experiment no.	Name of Experiment	CO
1	Interpret the characteristics and functionality of solid-state electronic devices for classification and application in electronic circuits.	CO1
2	Selection of different types of sensors and actuators in mechatronic systems with its application.	CO2
3	Develop a ladder logic program using PLC for a bottle filling plant as part of a Mechatronic system	CO3
4	Construct a ladder logic-based PLC program for a Water Level Controller and demonstrate its integration in a Mechatronic system.	CO3
5	Implementation of ladder logic program using PLC for a Lift Control System in the context of Mechatronic automation.	CO3
6	Demonstration of Electro Pneumatic Systems	CO4
7	Demonstration of Electro Hydraulic Systems	CO4
8	Comparative Study of Industrial Robots Based on Configuration and Degrees of Freedom. (Articulate, SCARA, Cartesian, Cylindrical, Delta)	CO5
9	Study of Articulated Robot Configuration and Degrees of Freedom	CO5
10	Performance of Pick-and-Place Operation Using Articulated Robot	CO5

2	<a href="https://nptel.ac.in/courses/112103174">https://nptel.ac.in/courses/112103174</a>

	Course Outcomes	CL
<b>BME33614.1</b>	<b>Interpret</b> the characteristics and functionality of solid-state electronic devices, to get classification, and application in electronic circuits.	3
<b>BME33614.2</b>	<b>Illustrate</b> the selection and application of sensors to, highlight their functionality and importance in system design.	3
<b>BME33614.3</b>	<b>Demonstrate</b> the ladder logic programming using PLC for automation.	3
<b>BME33614.4</b>	<b>Demonstrate</b> knowledge of electro-hydraulic systems, to gain knowledge of design and troubleshoot hydraulic circuits.	3
<b>BME33614.5</b>	<b>Summarize</b> the performance characteristics of articulated robots in pick-and-place operations, to influence their performance.	5
