Teaching S	cheme		Examination Scheme		
		Course Code: BAI12402	CT1	15 Marks	
Theory	3 Hrs./Wk. Engi	Course Name: Software Engineering & project	CT2	15 Marks	
		Management Management	CA	10 Marks	
Total Credits	3		ESE	60 Marks	
Duration of ES	E: 3 Hrs.		Total	100 Marks	

Course Objectives:

- 1. **To** develop understanding of basic software engineering principles and practices required for systematic software development.
- 2. **To** enable learners **to** analyze various software process models and understand their application in different project environments.
- 3. **To** provide knowledge of architectural styles and design patterns essential for effective software system structuring.
- 4. **To** build the ability to construct and apply software testing strategies including unit testing, system testing, and the use of product metrics.
- 5. **To** develop competency in identifying and applying steps and techniques for improving overall software quality.

Course Contents Introduction To Software Engineering: Software Characteristics, Software Engineering a Layered Technology, Software Process Framework, Software Myths, Software Engineering Principles and Practice: Unit-I Communication Practices, Planning Practices, Modeling Practices, Construction Practice & Deployment, System Engineering Hierarchy, System Modeling. **Software Process Models:** The Waterfall Model, Incremental Process Models, Evolutionary Process Models, Specialized Process Models, Software Deployment, Unit-II Overview of Agile Model types features; Scrum, Data Modeling: Scenario Based Modeling, Flow Oriented Modeling, Class based Modeling, Behavioral Model. **Design Concepts:** Abstraction, Pattern modularity, Information hiding, Design classes, Refactoring, Creating an Architectural Design: Software architecture, Data design, Architectural styles and patterns, **Unit-III** Architectural Design, assessing alternative architectural designs, mapping data flow into a software architecture. **Testing Strategies:** A strategic approach to software testing, test strategies for conventional software, Black-Box Unit-IV and White-Box testing, Validation testing, System testing, the art of Debugging, Product Metrics: Software Quality, Framework for Product metrics, Metrics for Analysis Model, Metrics for Design Model, Metrics for testing. Metrics for Process and Products, Metrics for software quality

Unit-V	Software quality assurance, Software Reviews, Formal technical reviews, Statistical Software quality Assurance, Software reliability, The ISO 9000 quality standards, Risk management: Risk strategies, Software risks, Risk identification, Risk refinement, RMMM, Risk Response Control, Risk Analysis: Agile management using Jira, Scrum Change Management- Software Configuration Management, Software reengineering, Reverse Engineering: A practical approach, Recent Trends in Software Engineering
Text Boo	ks:-

Cours	e outcome	CO
1	Create relational tables with appropriate constraints and structure using SQL DDL commands.	6
2	Manipulate data effectively using SQL DML operations such as insert, update, delete, and conditional retrieval.	3
3	Apply filtering, sorting, grouping, aggregation, joins, and subqueries to analyze and retrieve meaningful information from relational datasets.	3
4	Construct views, computed columns, unions, and constraint-based designs to enhance database functionality and integrity.	3
5	Develop a real-life SQL-based mini application integrating table creation, data handling, joins, views, and triggers.	5

Examination Scheme

Duration of ESE:2Hrs.

Course Objectives:

- To help students understand the concepts, types, and traits of entrepreneurs, and differentiate 1. entrepreneurship from intrapreneurship.
- To enable students to generate business ideas, evaluate opportunities, and conduct feasibility and 2. market analysis for startup ventures.
- 3. To equip students with practical knowledge of business modeling, team formation, operations, legal aspects, and funding strategies.
- To familiarize students with the startup ecosystem, including accelerators, investors, government 4. support, scaling strategies, and exit planning.

Course Contents

Fundamentals of Entrepreneurship

Unit I Definition & concept of entrepreneurship - Traits & types of entrepreneurs (lifestyle, social, scalable, etc.) - Intrapreneurship vs entrepreneurship- Motivation, risk-taking, entrepreneurial mindset- Business structures (sole proprietorship, partnership, company)

> Case Study: Godrej Family Business: Explore how Godrej evolved from a family business, the role of leadership across generations, and how it balances tradition with innovation.

Startup Ecosystem & Ideation

Unit II

Startup definitions & types (scalable, social, buyable, etc.) - Components of startup ecosystem (incubators, accelerators, mentors, investors) - Ideation: generating ideas, brainstorming, design thinking - Incubation: what it is, how it works - Technology Readiness Levels (TRL)

Case Study: Zomato's Ideation & Pivot: Examine how Zomato started, recognized market opportunities, pivoted business models, and scaled.

Business Modelling & Market Strategy

Unit III Market analysis: target market, customer segmentation - Competitive analysis & strategy formulation - Business Model Canvas / Lean Canvas - Marketing strategy for startups -Financial planning: accounting basics, revenue models - Risk analysis & mitigation Case Study: Flipkart's Early Funding & Operations — Discuss how Flipkart raised funding in its early years, built a team, managed operations, and grew in the e-commerce sector.

Unit IV

Funding, Growth & Exit Funding options: angel, venture capital, private equity - Differences between funding sources - Pitching to investors - Scaling up: growth strategies - Exit strategies (acquisition, IPO, buyouts) - Challenges & failures: causes and recovery

	Text Books
